

# A Mathematical Introduction to Fluid Mechanics

Tiejun Li

School of Mathematical Sciences, Peking University,

Beijing 100871, P.R. China

*Email: tieli@pku.edu.cn*

- Lect1 Introduction
- Lect2 Tensor operations and curvilinear coordinates
- Lect3 Derivation of Euler equations
- Lect4 Isentropic flow and Bernoulli's theorem
- Lect5 Vortex and Kelvin's theorem
- Lect6 Potential flow
- Lect7 Derivation of Navier-Stokes equations
- Lect8 Typical models in fluid mechanics
- Lect9 Boundary layer theory
- Lect10 Projection methods
- Lect11 Random vortex methods
- Lect12 Mathematical theory of NSE
- Lect13 Stability theory
- Lect14 Derivation of NSE from Molecular dynamics
- Lect15 Characteristics and Riemann invariants
- Lect16 Shock and entropy conditions (I)
- Lect17 Shock and entropy conditions (II)
- Lect18 Piston problem
- Lect19 Riemann problem and Glimm's scheme
- Lect20 Difference methods for conservation laws
- Lect21 An introduction to non-Newtonian flow
- Lect22 Turbulence
